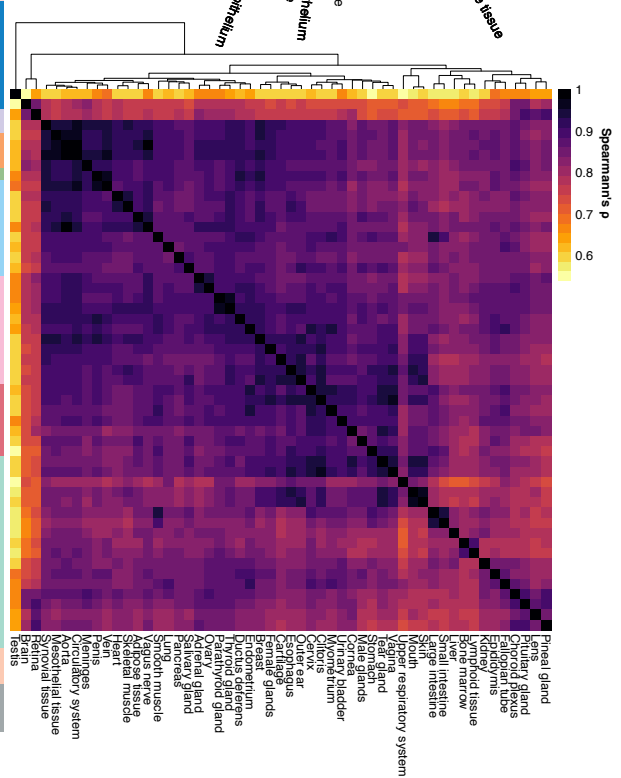

Figure 1. Overview of the Rat RNA Atlas dataset. **A** Assigned hierarchy of 100 tissues grouped into 53 grouped tissues and assigned into 15 organ systems. **B** Circular dendrogram built using Ward's minimal variance clustering method (ward.D2) based on tissue to tissue spearman distance. **C** Clustered heatmap of grouped tissues showing spearman correlation (spearman's ρ) between each other. Clustering based on euclidean distance.
